

The Mayan virgin honey or Mayan honey is produced by the native bee Xuna'an Kab. it is believed that this is a more moist and acid honey, with less tendency to crystallization. Since pre-hispanic times, honey has been in the mayan pharmacopoeia as the main ingredient for many remedies.

Honey is the flower juice which strengthens and heals the body, sweetens the taste of life and it is considered the essence of the drink of the gods.

The Xuna'an Kab(melipona beechi) belongs to the group of meliponios, on which the native American bee fall, which is known as "stingless bees" in reality they do have the sting, it is just rudimentary and is not intended as weapon for them to defend themselves, or to use it as a method of aggression.

These bees are located mainly in the south of the country(Campeche, Yucatan, Quintana Roo and Chiapas), and they belong to an endangered species.

The production of this honey is all natural, recommended in the treatment of the following: eye cataract, pterygium, conjunctivitis, eye wounds and ulcers or sores on the skin which are difficult to heal, haemorrhoid inflammation, spots of the skin caused by gestation, liver disease or sunburn. this honey is also recommended for respiratory problems.
